Frac Sand Plant

Products

Isogate® slurry valves
Cavex® hydrocyclones
Linatex® FB classifier
Warman® slurry pumps

Location

Arkansas, USA

Frac sand aggregate system leads to future project success for Weir Minerals

Our frac sand processing customer had attempted many methods of dry screening and was unable to provide a quality 40/70 mesh material. Weir Minerals Linatex worked with the customer and was able to provide a solution that produced a quality 40/70 mesh product and eliminate turbidity problems by providing the cleanest sand in the market. As a result, the customer stated that their sand cleanliness was now "second to none".

This project represented the first sale of a Linatex® FB Classifier in North America by Weir Minerals Linatex. The sale also included a package of Weir Minerals products including, Cavex® hydrocyclones, Isogate® valves and other assorted minerals processing equipment.

After the first sale, Weir Minerals Linatex successfully packaged an array of Weir Minerals products for the customer's plant upgrade in 2010, and for a second plant site in 2011, which also included Warman® WGR™ slurry pumps and Isogate® valves. The frac sand processing customer had a specific need, and Weir Minerals Linatex was able to meet and exceed that need, leading to a successful and beneficial relationship for both.

For more information regarding these products please contact your local Weir Minerals representative.
